HWg PDMS: Monitoring software

HWg PDMS is a Windows application, primarily designed for IT environments, that logs temperature, energy consumption, or access to monitored rooms. Up to 100 input devices can be connected over a network. The application can display a graphical summary and generate MS Excel reports.

HW group develops products for monitoring the environment (temperature, humidity, energy consumption, and so on). The HWg-PDMS application (Poseidon Damocles Monitoring Software) is designed for collecting and monitoring the measured data.

HWg-PDMS offers an easy and user friendly MS Excel export capability. End users can utilize the full functionality of MS Excel to format and analyze their data. For example, it is very easy to create a single-page summary of datacenter cooling statistics.

Typical HWg-PDMS users

- **IT department:** Needs to monitor temperature, electricity supply, and access to server rooms.
- **Audit:** End users that need data logging (operations / storage audit).
- **Outsourcing:** Keeps a log of the quality of the provided services. The generated MS Excel summary can be attached to the invoice as a quality assurance measure
- **Operations logs:** History record that can be manually exported to MS Excel if needed.

Registered version of the software is free of charge for one year.

About HW group

HW group s.r.o. is a dynamic company based in the Czech Republic. Since 2000, HW group develops and distributes network technology products. The product portfolio is targeted to measuring and data collection. Approximately 60% of the production is destined to the EU market, 30% is exported outside of the EU.
